

# Liquid Heated Blade System

## for Richwood Belt Cleaners

Prevent your product from freezing to your conveyor belt.

The Richwood liquid heated blade system is designed for use with any standard Richwood Belt Cleaner.

The self-contained system circulates heated liquid through specially designed Richwood heated cleaner blades. This helps prevent build up of material on the blades due to freezing conditions and allows the cleaner to maintain top performance.

The system uses standard anti-freeze, no special chemical required. It can heat up to four Richwood cleaner blades in one location.

Rely on Richwood! Call today for assistance with your application.

- 25 gallon tank with bypass valve, shut-off valve and clean out
- 230 Volt, 60Hz. wet rotor pump, shut off at 14' of head
- two 4,500 watt immersion heaters with thermostat control and low liquid level safety shut off switch
