

Ice Breaker

Prevent Ice Build Up on Pulleys

The Richwood Ice Breaker is designed to prevent ice or material build up on snub pulleys, gravity take-up bend pulleys, or any pulley surface subject to ice or material accumulation.

The system is designed to be located 1/8" or 1/4" away from the pulley face.

The Ice Breaker uses a replaceable tungsten carbide blade for long life and efficient scraping of ice or crusted material.

Each Ice Breaker is custom engineered to fit each application.

Available with heated blade and automatic thermostat relay control to prevent ice build up on the cleaning blade.

- *full width cleaning blade*
- *heavy duty design*
- *cleans evenly and completely*
- *easy to replace blades*
