

# Rapid-Lagg®

## Rubber Pulley Lagging

Rapid-Lagg® rubber pulley lagging is the premier rubber lagging product on the market today. Using our custom in-house rubber mixing process we use the highest quality materials, making Rapid-Lagg® the most durable rubber lagging available.

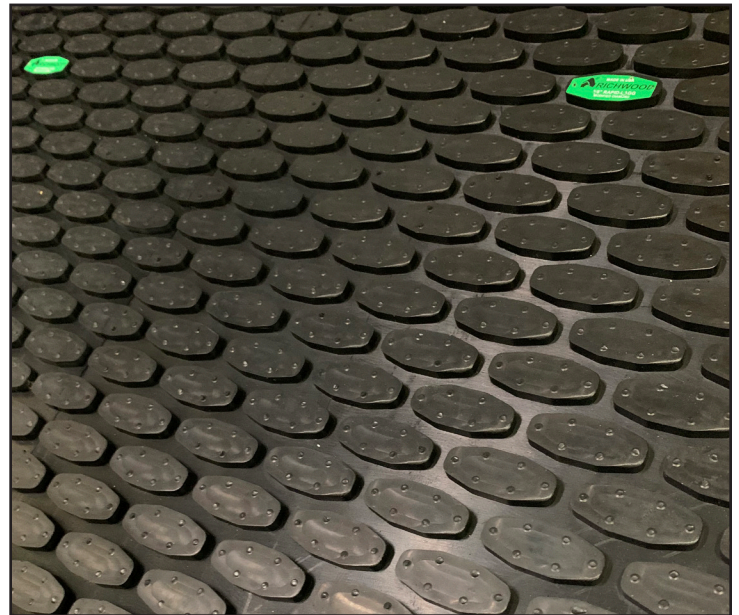

Our innovative tread design is known as the Modified Diamond Profile. Our experienced lagging team can recommend the right lagging for your application.

Rapid-Lagg® is packaged pre-buffed and primed at our factory to ensure that you always have a fresh bonding surface. Our strips are then sealed in thick, airtight plastic sleeves so that everything stays clean even when lagging a pulley in the most unfriendly environment.

Rapid-Lagg® is proudly made in the USA in our Huntington, West Virginia, rubber facility. This gives Richwood the ability to provide industry-leading delivery times even on non-standard compounds.

Thickness	Width	Max Length	Profile	Compounds
3/8"	19"	120"	Modified Diamond	SBR, MSHA
1/2"	19"	120"	Modified Diamond	SBR, MSHA
5/8"	19"	120"	Modified Diamond	SBR, MSHA
3/4"	19"	120"	Modified Diamond	SBR, MSHA
1"	12-1/2"	144"	Modified Diamond	SBR, MSHA

	R2000LS SBR	MSHA Grade (#IC-182/4)
Durometer	60+/-5 Shore A	60+/-5 Shore A
Elongation	525%	500%
Tensile Strength	3800	2000

All Richwood products are backed by our 3-year Manufacturer's Warranty
