

ITC Belt Cleaners

Infinity Tungsten Carbide Belt Cleaning Systems

The 1C-ITC belt cleaner utilizes an ITC cleaning blade. The ITC blade is a one-piece molded cartridge with three media layers. The cleaning edge is backed by a shock absorbing rubber cushion layer molded directly to a rear support layer.

Using rubber directly behind the tungsten cleaning edge allows the ITC to work with and conform to irregularities in the conveyor belt.

The 1C-ITC system's shock absorbing design allows mechanical belt splices to pass across the blade without harm, while debris and carryback are stopped.

Heavy duty frame designs are available for all types of operating conditions, including highly corrosive and extreme service environments.

Each Model 1C-ITC is engineered to fit your application for best performance. Call today for assistance with your application.

- *full width cleaning blade*
- *extend conveyor life and components*
- *heavy duty design*
- *cleans evenly and completely*
- *easy to replace blades*

1C-ITC Belt Cleaner

Infinity Tungsten Carbide

The 1C-ITC Belt Cleaner from Richwood is a unique single blade system, combining extra long life blade media with a shock absorbing tension system and heavy-duty support frames, creating an efficient belt cleaner for any application.

Field tests show that the ITC can last up to 12 to 18 months with zero maintenance, while delivering clean and dry return belts. No other belt cleaning system eliminates carryback and protects your conveyor belt like Richwood Belt Cleaning Systems.
