

RockKnocker™

Gravity V-Plow

RockKnocker™ keeps the inside belt cover free from spillage and debris, protecting pulleys and idlers from trapped materials.

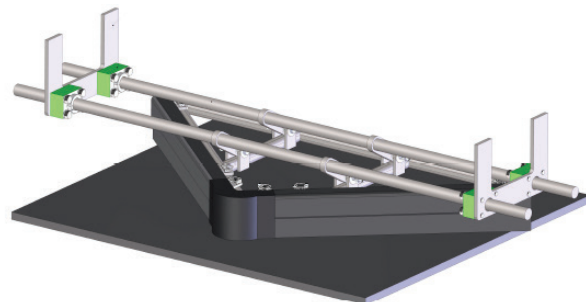

A clean return belt means extended life for belting and other components in your conveyor system.

The heavy-duty design stands up to the harshest environments. The sturdy mounting frame ensures the plow will stay in place, even in the worst conditions.

The unique, self-adjusting mounting frame design maintains full width blade-to-belt contact allowing the blade to clean evenly and completely.

Richwood's R2000 blade media, used with the V-Plow, is a super slick, long wearing material with a low coefficient of friction. The simple pin change out design makes replacement quick and easy.

The RockKnocker™ V-Plow is backed by our satisfaction warranty and Richwood product support.

- *heavy duty design*
- *keep the inside of your belt clean*
- *protect pulleys and idlers*
- *R2000 blade media*
- *easy to replace blades*
